Table 5.3**Major Classes of Clastic Sediments and Sedimentary Rocks**

Particle Size	Sediment	Rock
COARSE Larger than 256 mm 256–64 mm 64–2 mm	GRAVEL Boulder } Cobble } Pebble }	Conglomerate
MEDIUM 2–0.062 mm	SAND	Sandstone
FINE 0.062–0.0039 mm	MUD Silt	Siltstone
Finer than 0.0039 mm	Clay	{ Mudstone (blocky fracture) Shale (breaks along bedding) Claystone

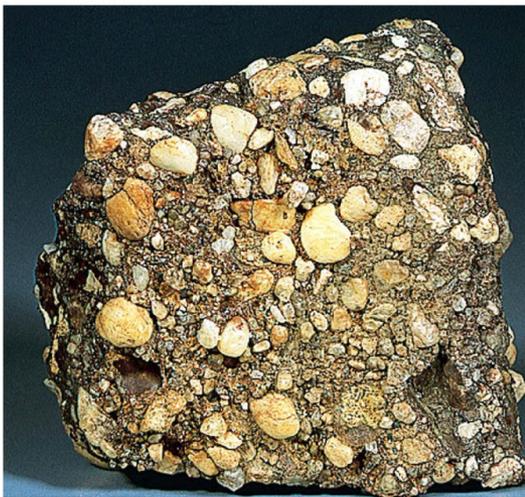

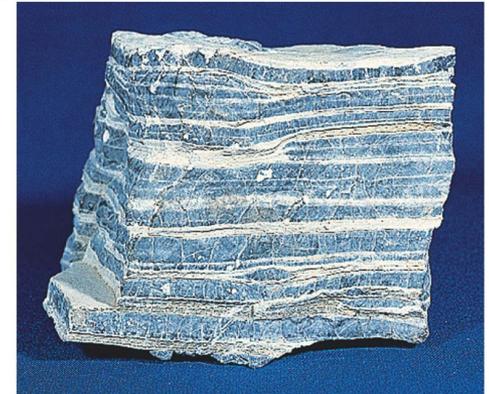

**(a) Conglomerate****(b) Sandstone****(c) Shale**

Table 5.4**Classification of Biological and Chemical Sediments and Sedimentary Rocks**

Sediment	Rock	Chemical Composition	Minerals
BIOLOGICAL Sand and mud (primarily bioclastic)	Limestone	Calcium carbonate (CaCO_3)	Calcite (aragonite)
Siliceous sediment	Chert	Silica (SiO_2)	Opal, chalcedony, quartz
Peat, organic matter	Organics	Carbon compounds; Carbon compounded with oxygen and hydrogen	(coal), (oil), (gas)
No primary sediment (formed by diagenesis)	Phosphorite	Calcium phosphate ($\text{Ca}_3[\text{PO}_4]_2$)	Apatite
CHEMICAL No primary sediment (formed by diagenesis)	Dolostone	Calcium-magnesium carbonate ($\text{CaMg}[\text{CO}_3]_2$)	Dolomite
Iron oxide sediment	Iron formation	Iron silicate; oxide (Fe_2O_3); limonite, carbonate	Hematite, siderite
Evaporite sediment	Evaporite	Sodium chloride (NaCl); calcium sulfate (CaSO_4)	Gypsum, anhydrite, halite, other salts

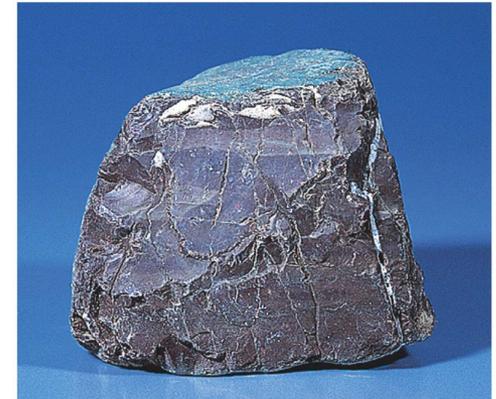

(a) Limestone

(b) Gypsum

(c) Halite

(d) Chert
