

final project proposal

assignment

For next week, you will be presenting 2 proposals for a final project and paper for this class.

The exact format of this proposal, whether mostly text or images, is up to you. It should have these sections:

- introduce your project - what is the data you are visualizing and how are you depicting it.
- show what it will look like
- explain what problem or issue it is meant to address
- explain how your project will help
- describe what it will do - both in its theoretical final state and in the much more limited version you will be presenting at the end of the semester
- enumerate the key influences on this work - other projects you have, cognitive theories you have read, etc.
