# China's Urbanization: What's So Special?

- Speed
- Economic Outcomes
- Resource/Environment Costs

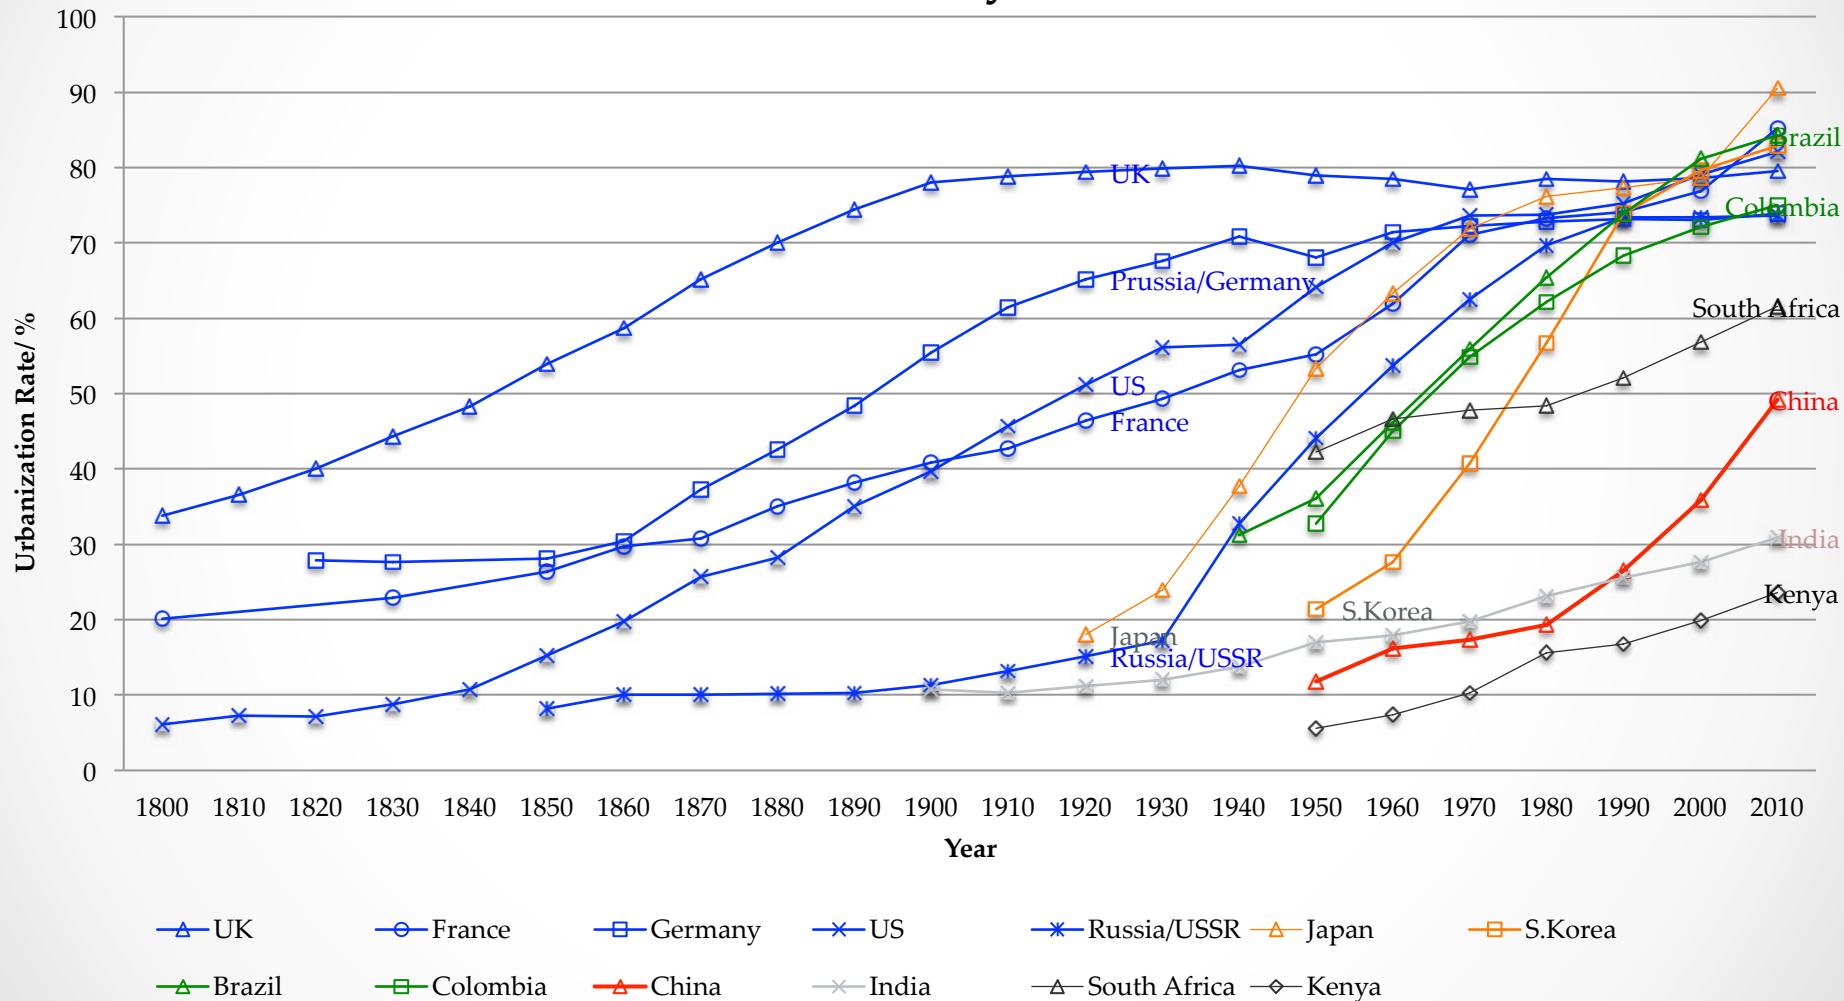

# Speed of Urbanization

- Rapid urbanization: far from “unprecedented”
  - Historical counterpart: Lowell, MA
  - Contemporary counterpart: Dubai
  - Country-level counterparts:
    - USSR, Japan, South Korea
    - Latin America

# China's Urbanization: What's So Special?

- Then, what's so special about China?
- Is China really an outlier?

# Concluding Remarks

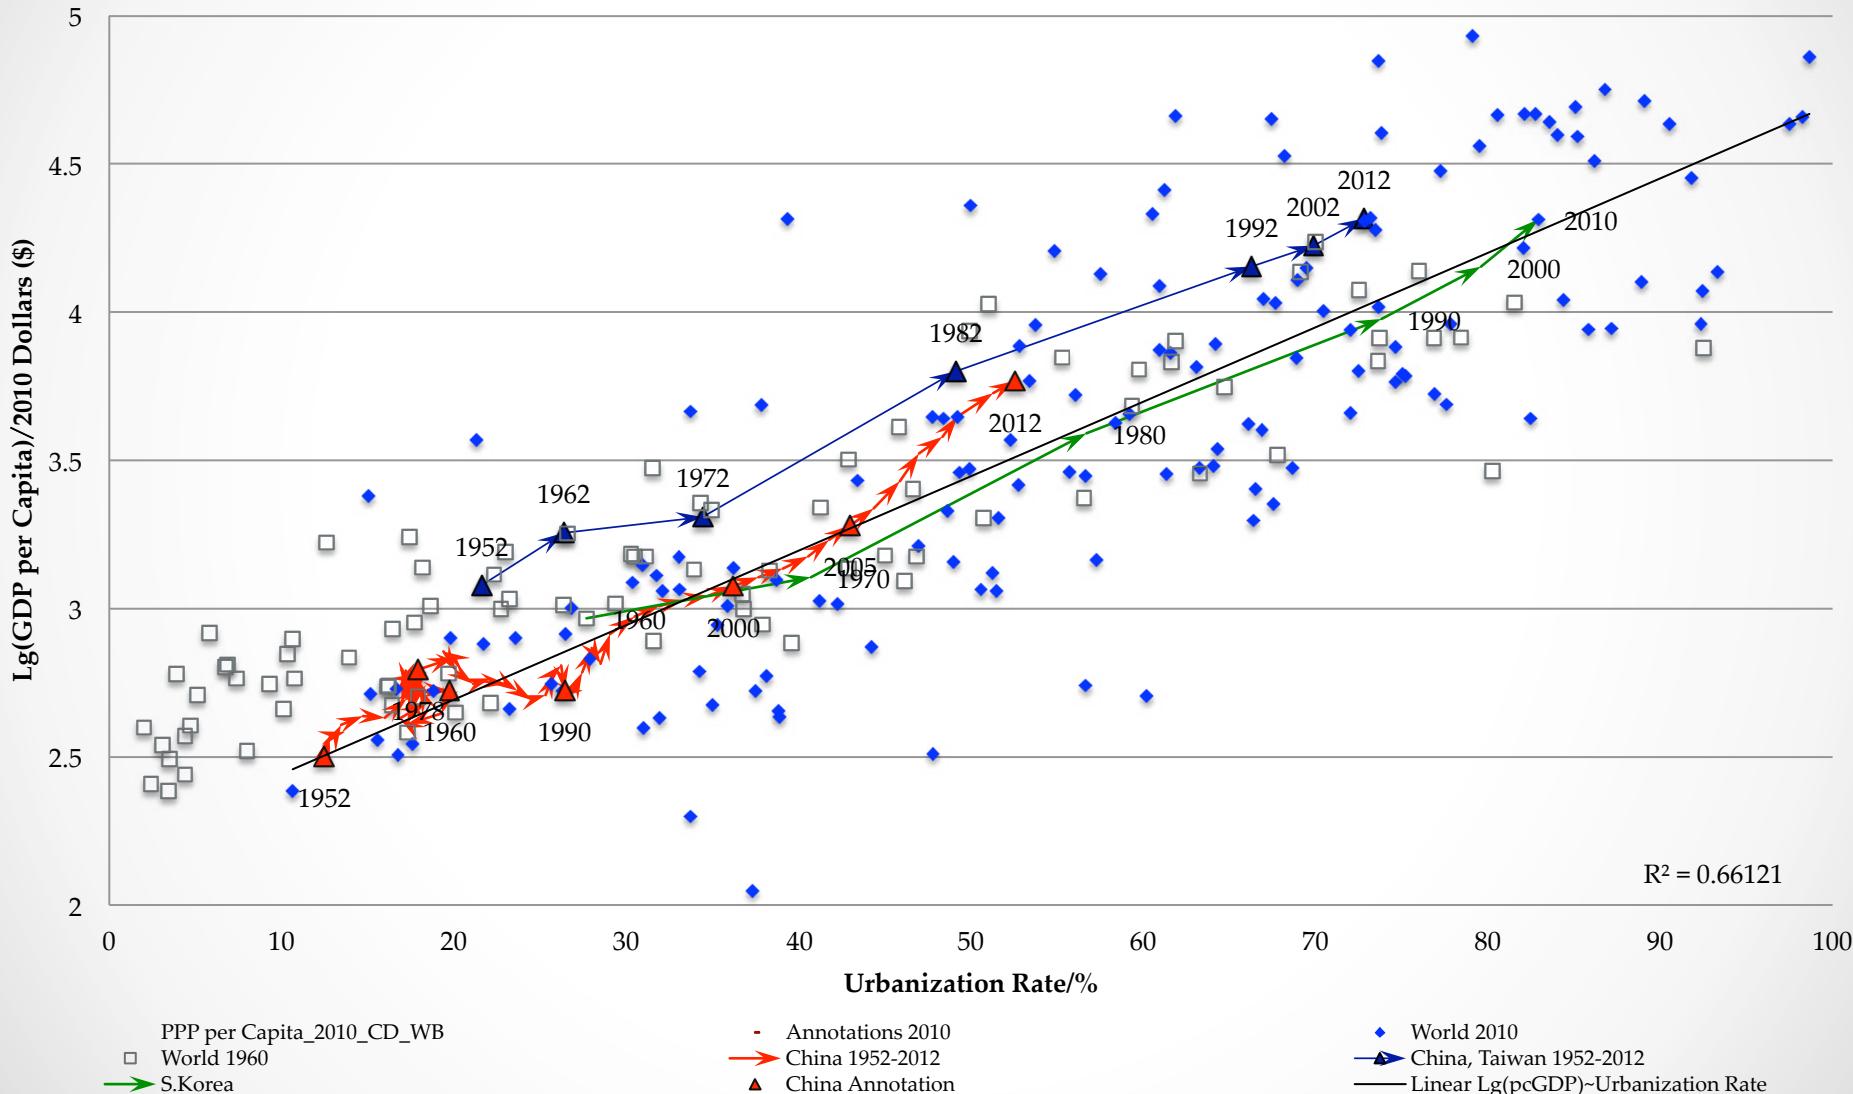

- China is unique
  - Normative vs. Positive Standards
- Why?
  - Scale matters
  - Internal complexities are unprecedented

# Normative vs. Positive Standards

- To be good doesn't necessarily mean to be normal
  - Despite the “norm” given by the fitting line (in terms of the relationship between urbanization and economic development), most countries have failed to adhere to the norm.
  - China is among the few developing countries/economies where urbanization is relatively healthy.
  - Even among these few countries/economies, China is probably the one with the worst beginning conditions, which makes China's achievements even more valuable.

# Winners

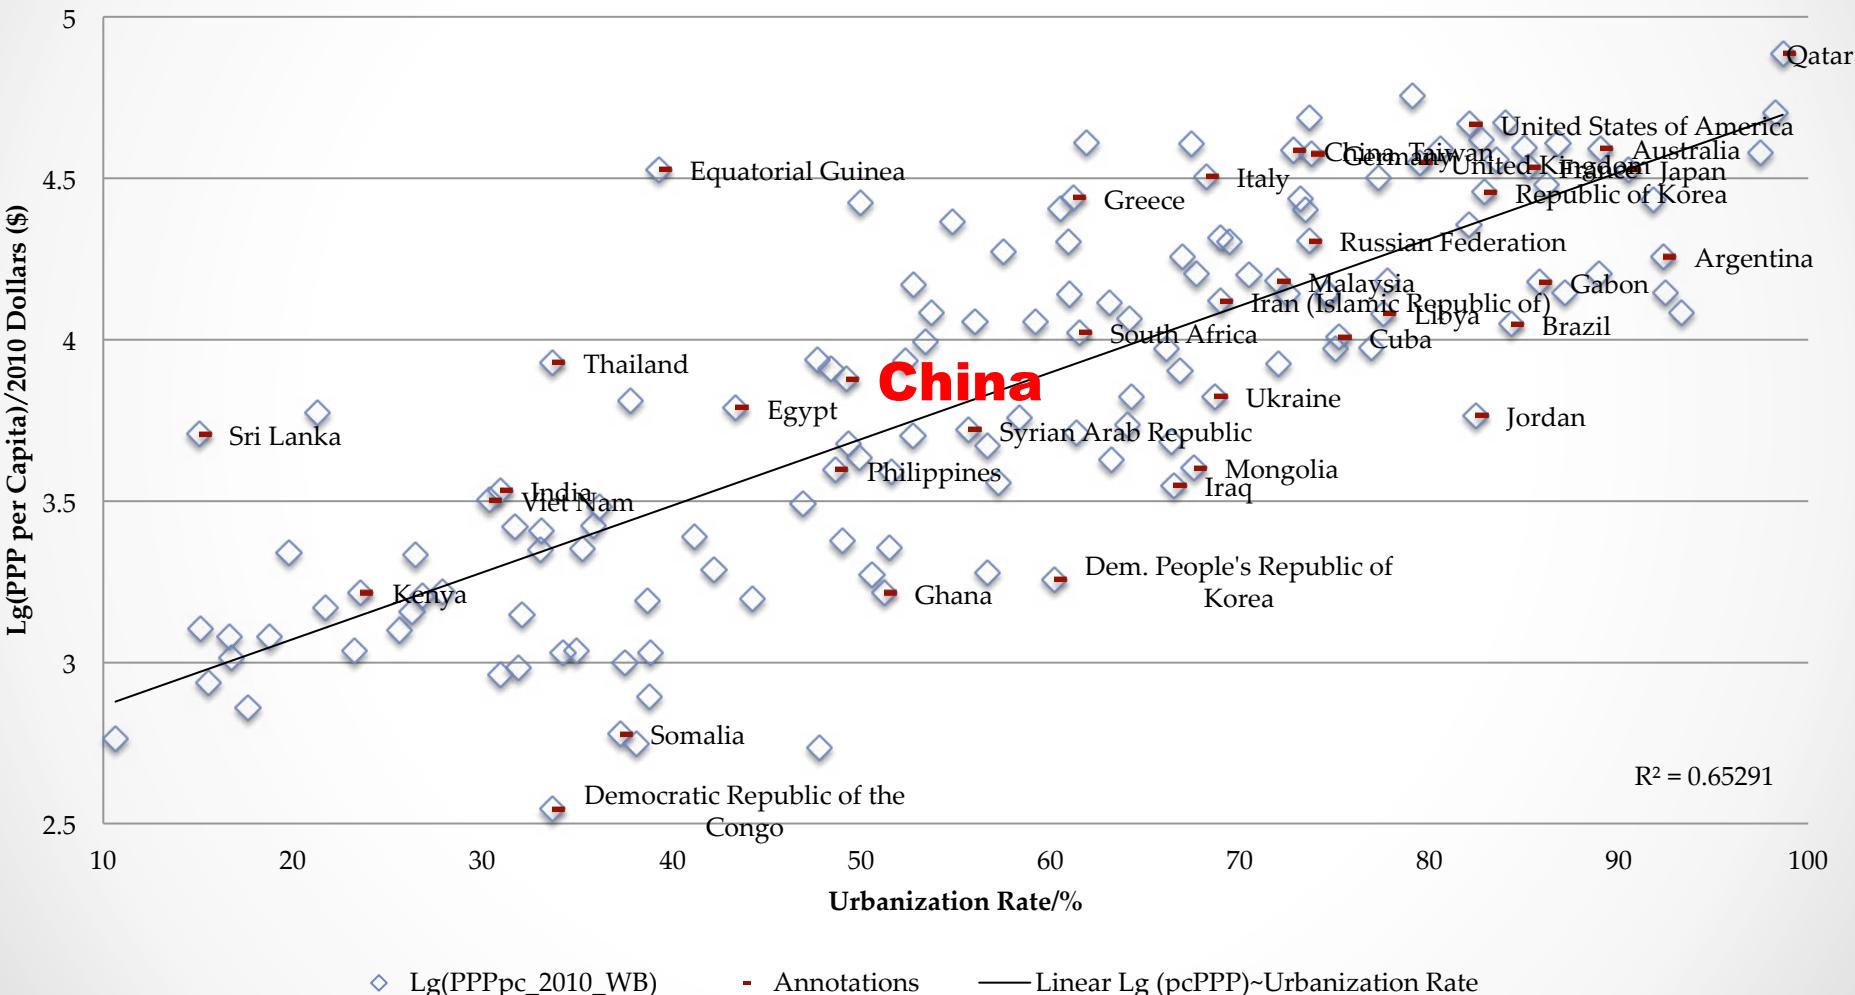

Urbanization Rate vs.  $\text{Lg}(\text{GDP per Capita})$ , World, 1960 - 2010; China, 1952-2012

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012, and on *China Compendium of Statistics 1949-2008*,

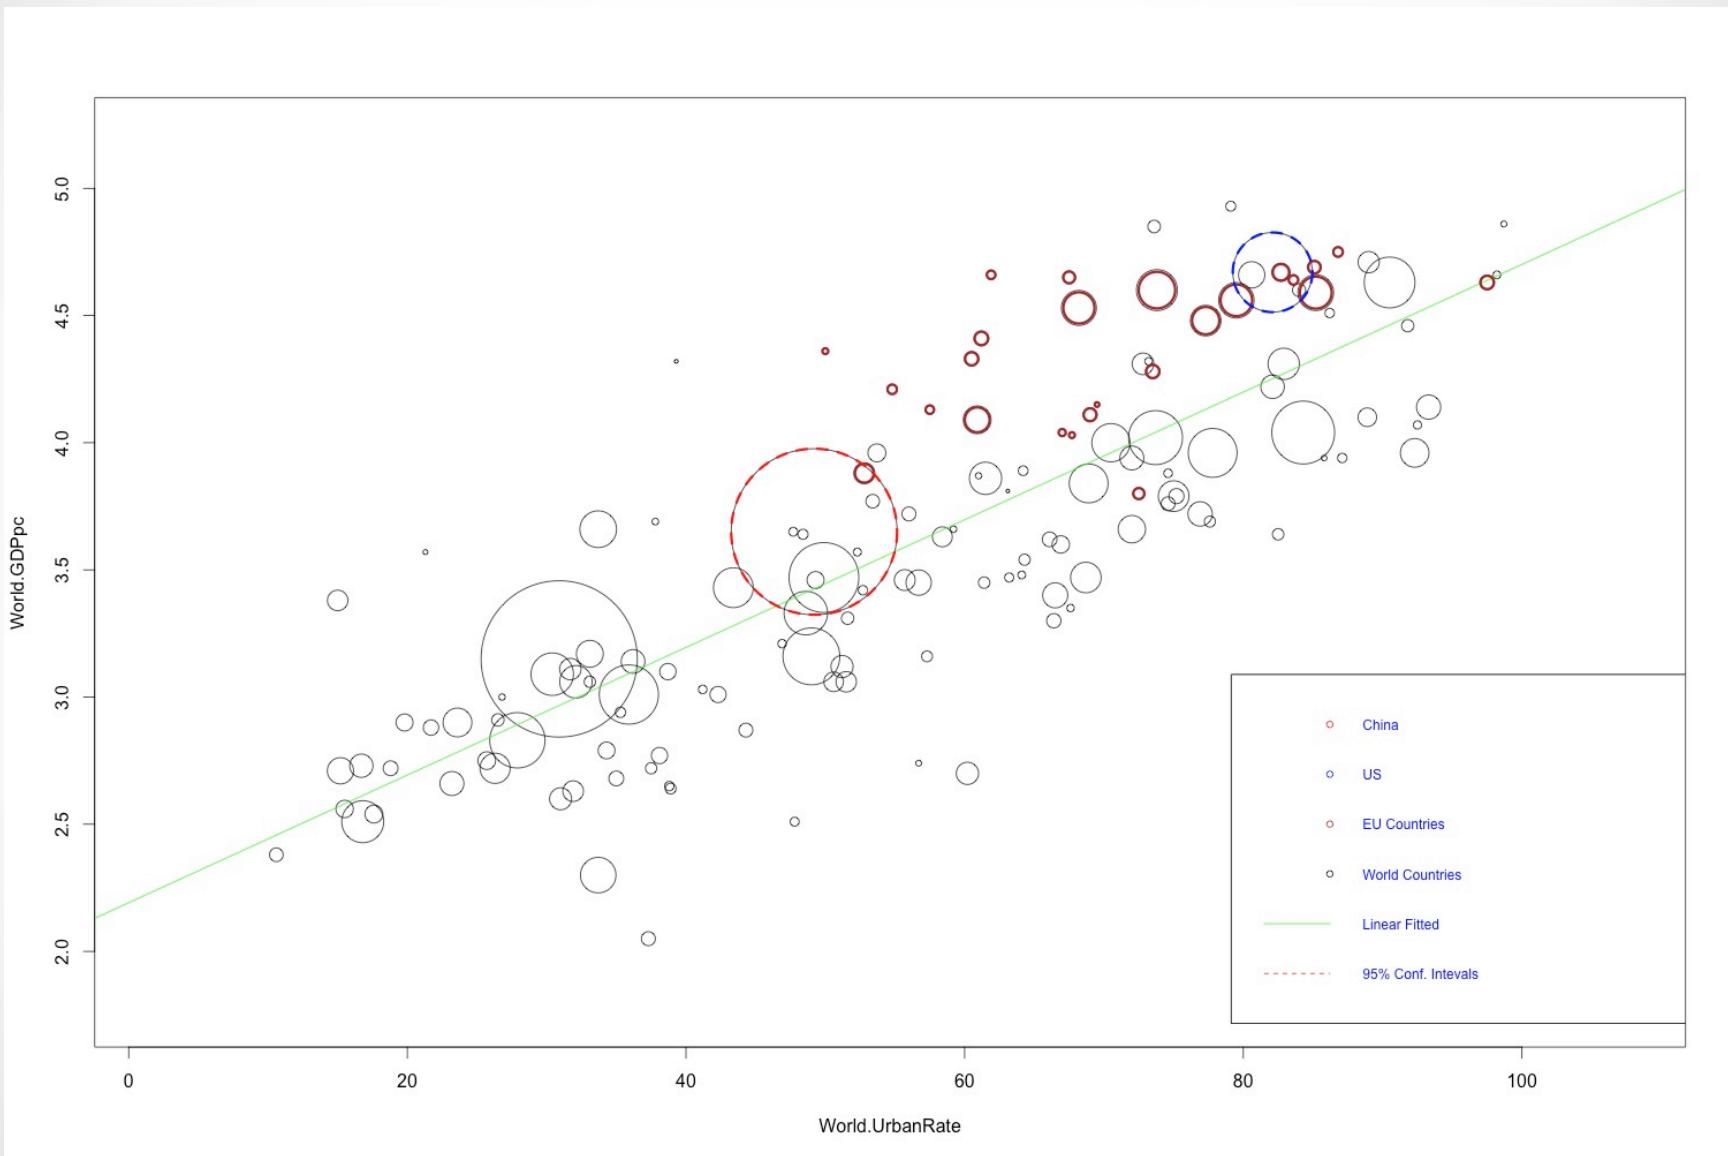

# Scale Matters

## Urbanization Rate vs. Lg(PPP per Capita), World, 2010

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012.

# Scale Matters

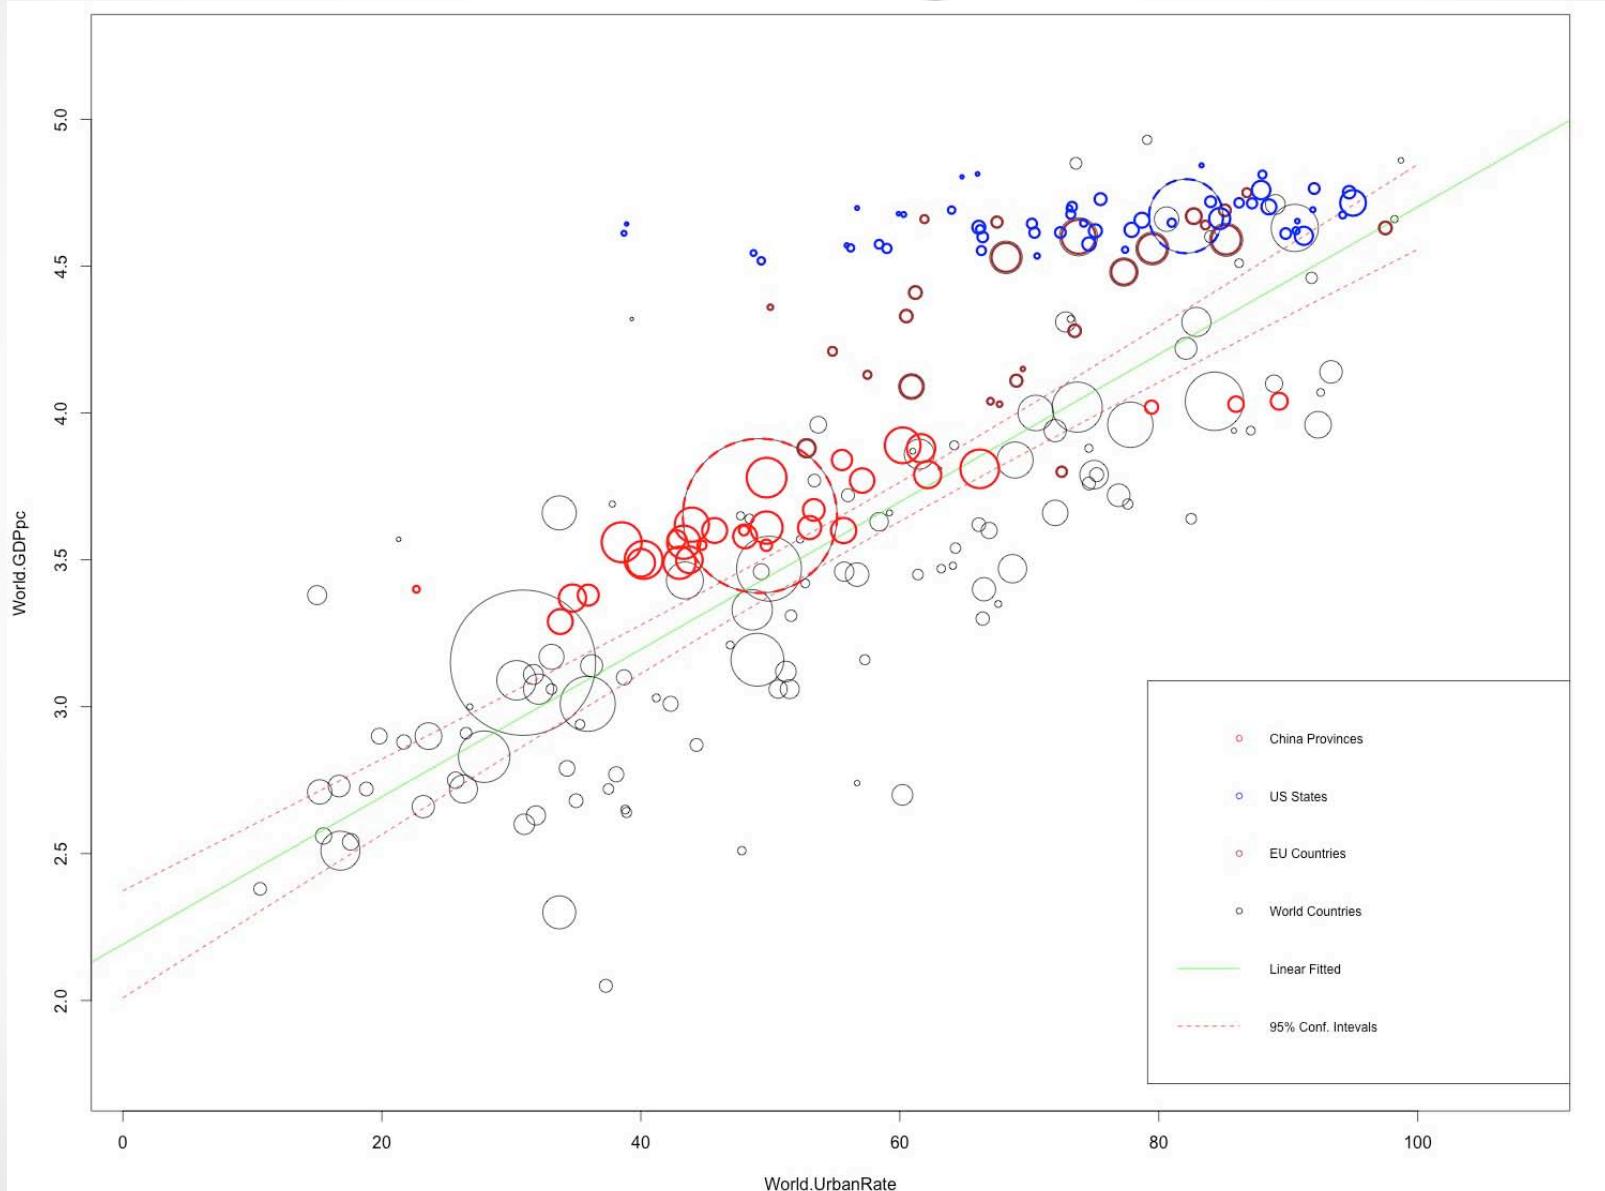

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012.

# Scale Matters

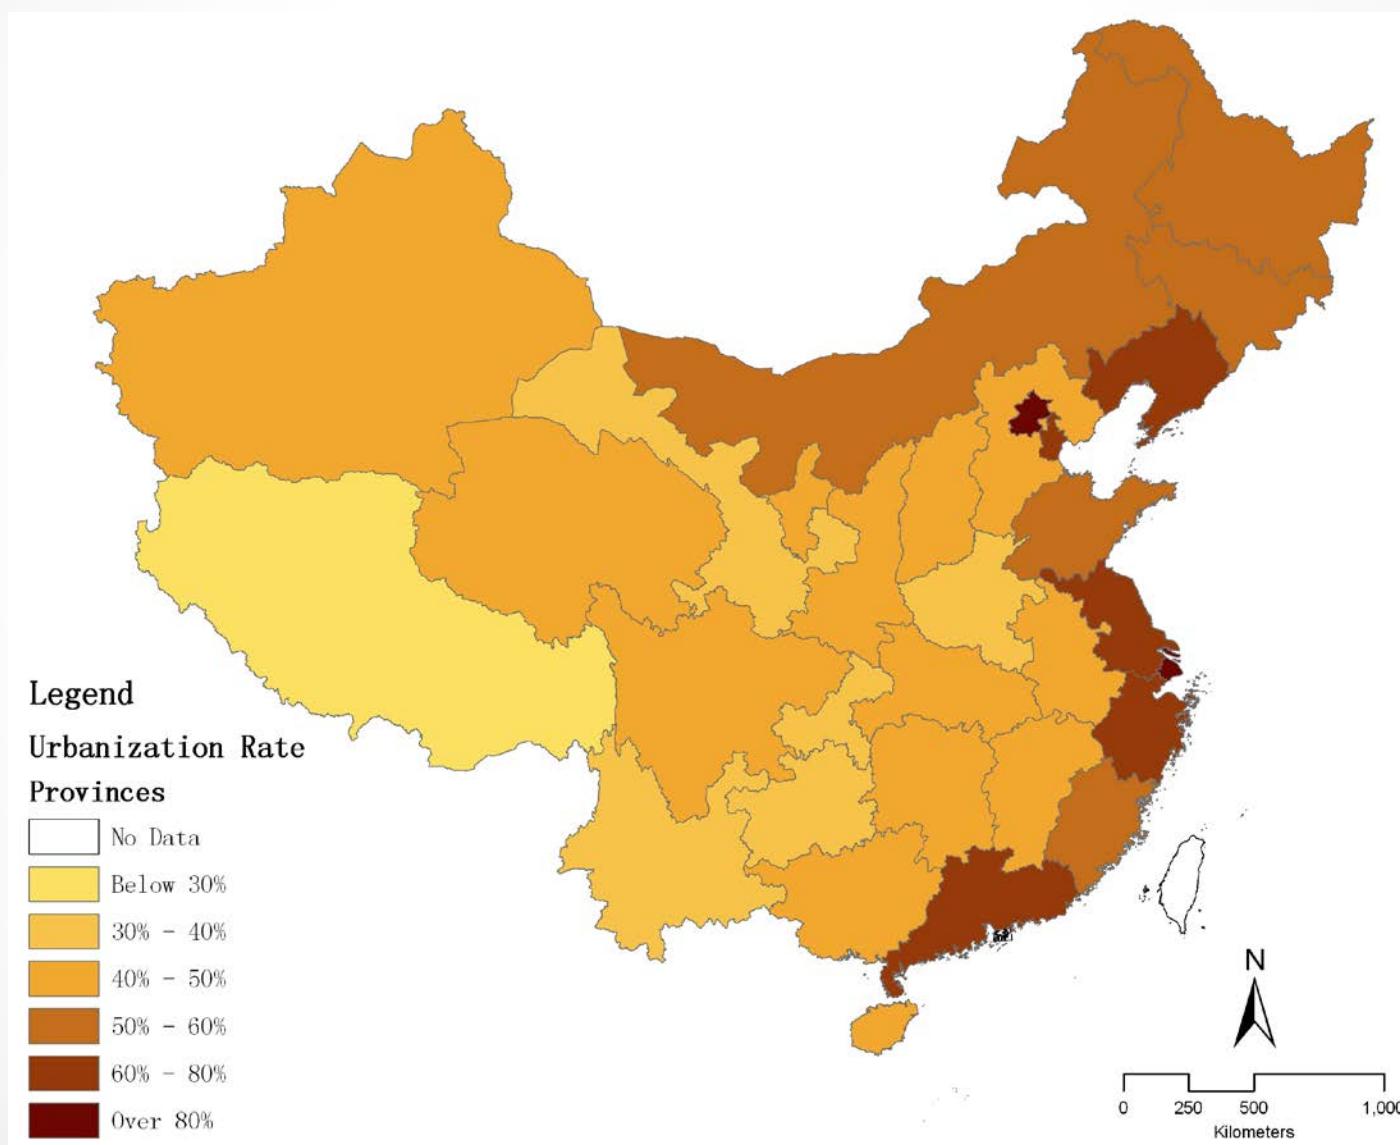

- Fast speed and fair economy outcomes may not be unique, but these achievements become valuable when considering the huge scale of the country.
- Why scale matters?
  - Huge scale may change the basic settings of the stage.
  - Partial equilibrium -> general equilibrium
  - Absolute amount usually matters when it comes to public goods, or public “bads”, negative externalities such as air pollution or GHG emission

# Internal Complexities

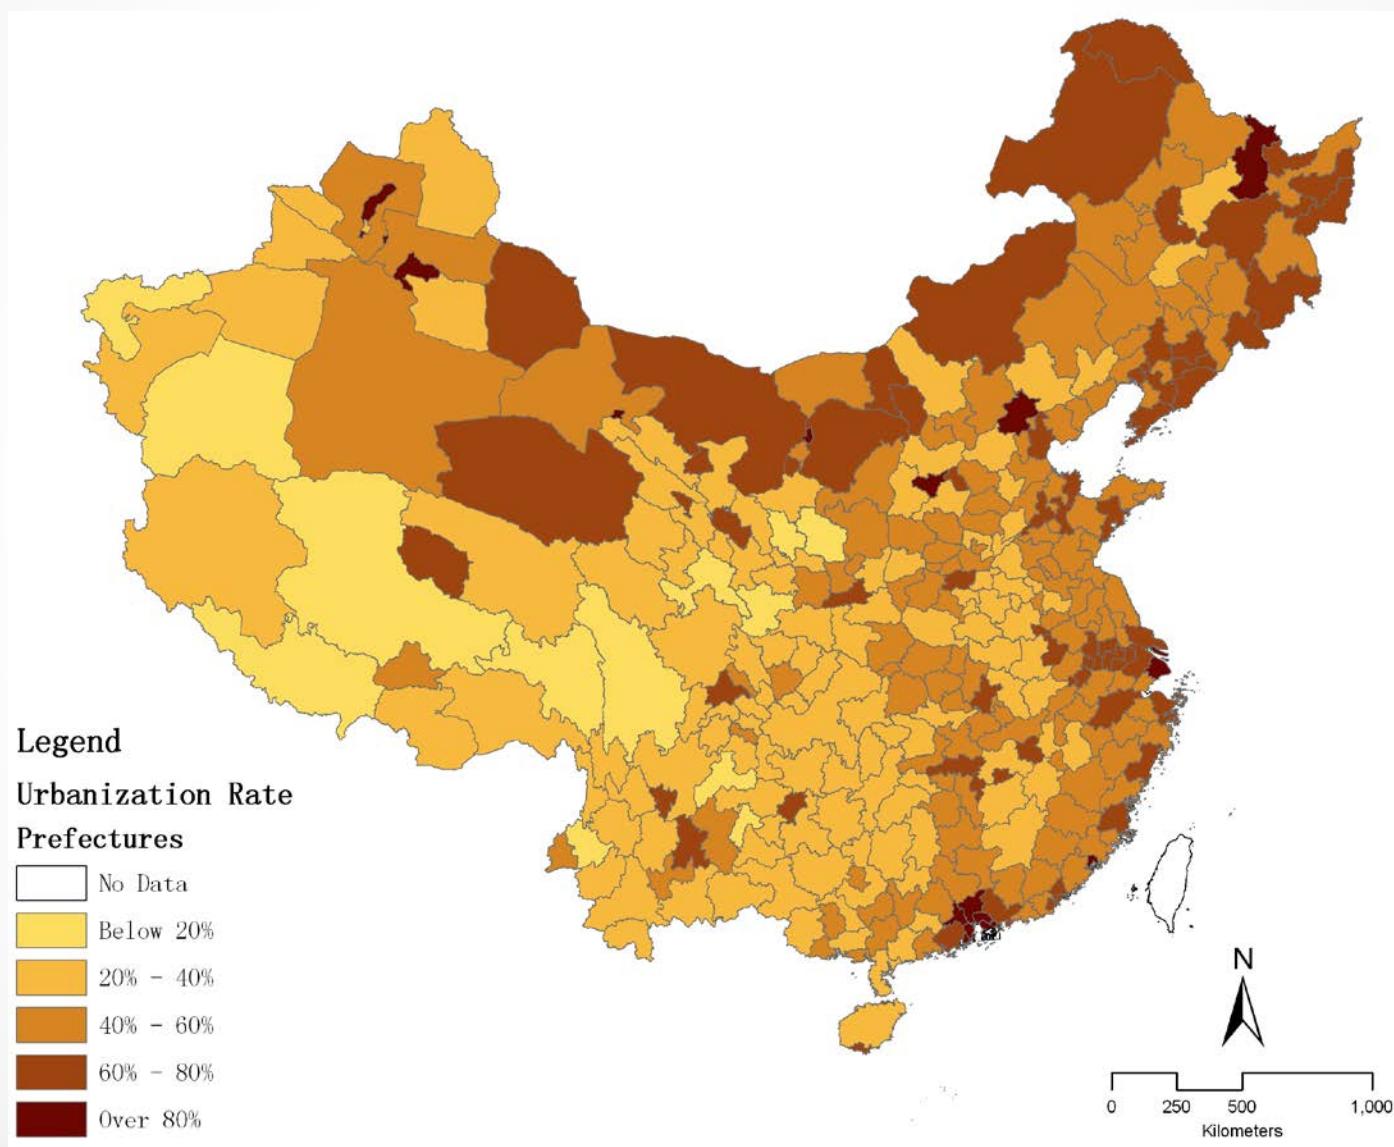

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012.

# Urbanization Rate at the Province Level

Source: Own calculation based on China's 6<sup>th</sup> National Census data

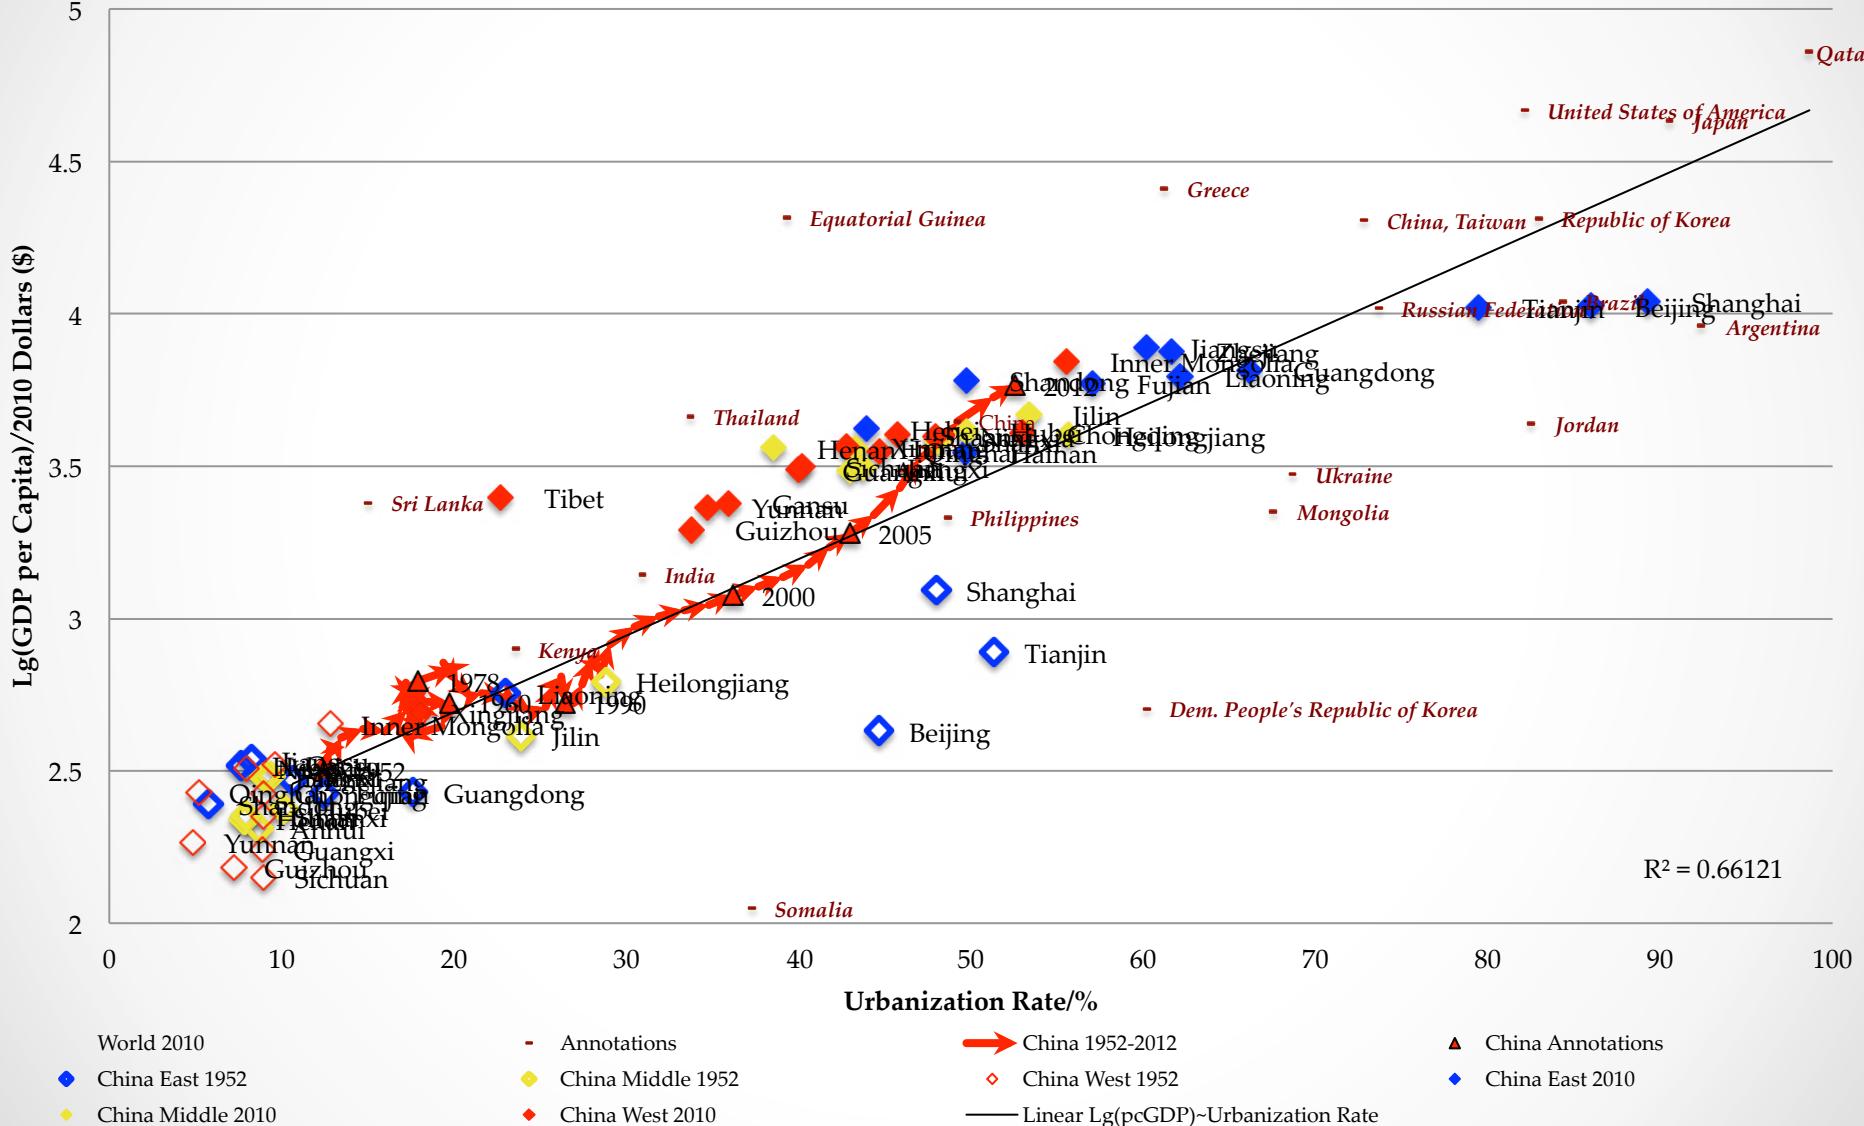

# Urbanization Rate at the Prefecture Level

Source: Own calculation based on China's 6<sup>th</sup> National Census data

# Unbalanced Urbanization

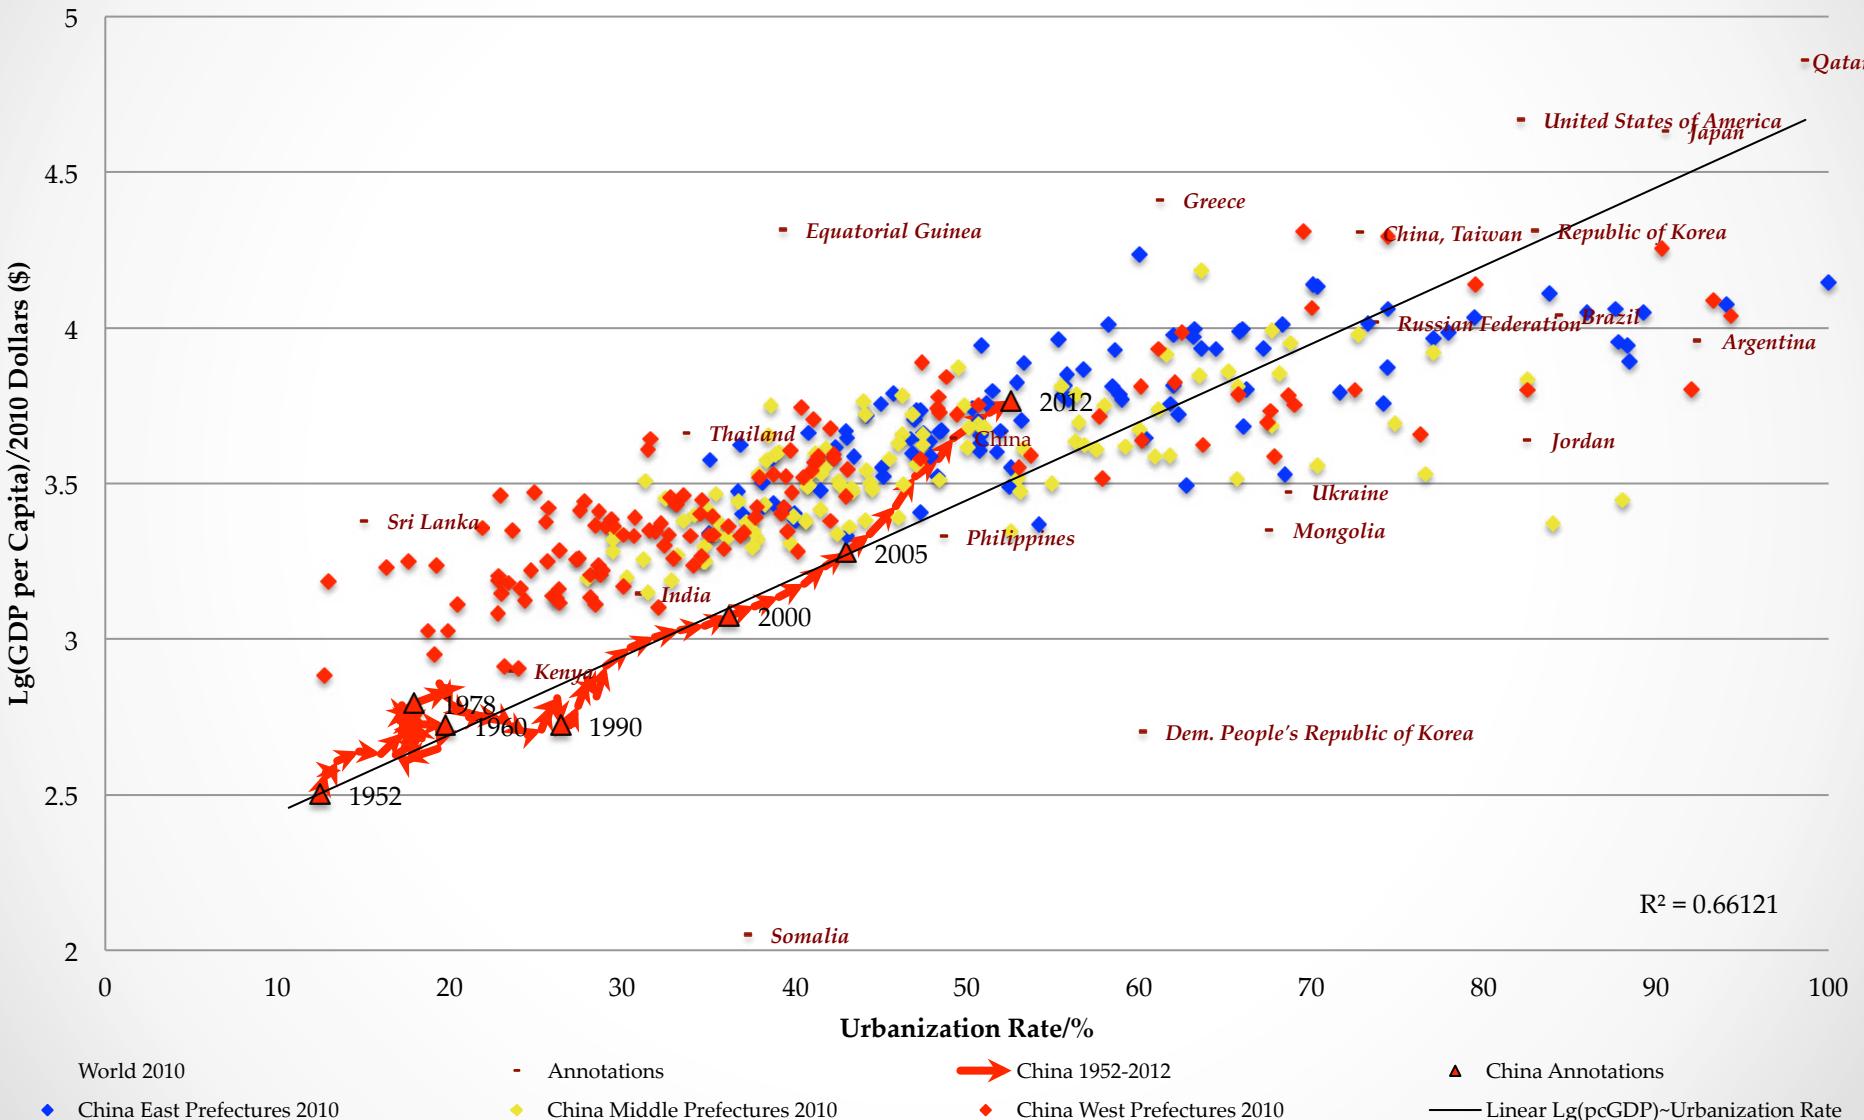

Urbanization Rate vs.  $\text{Lg}(\text{GDP per Capita})$ , China Provinces 1952-2012; Background: World, 2010

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012, and China's 6<sup>th</sup> National Census data

# Unbalanced Urbanization

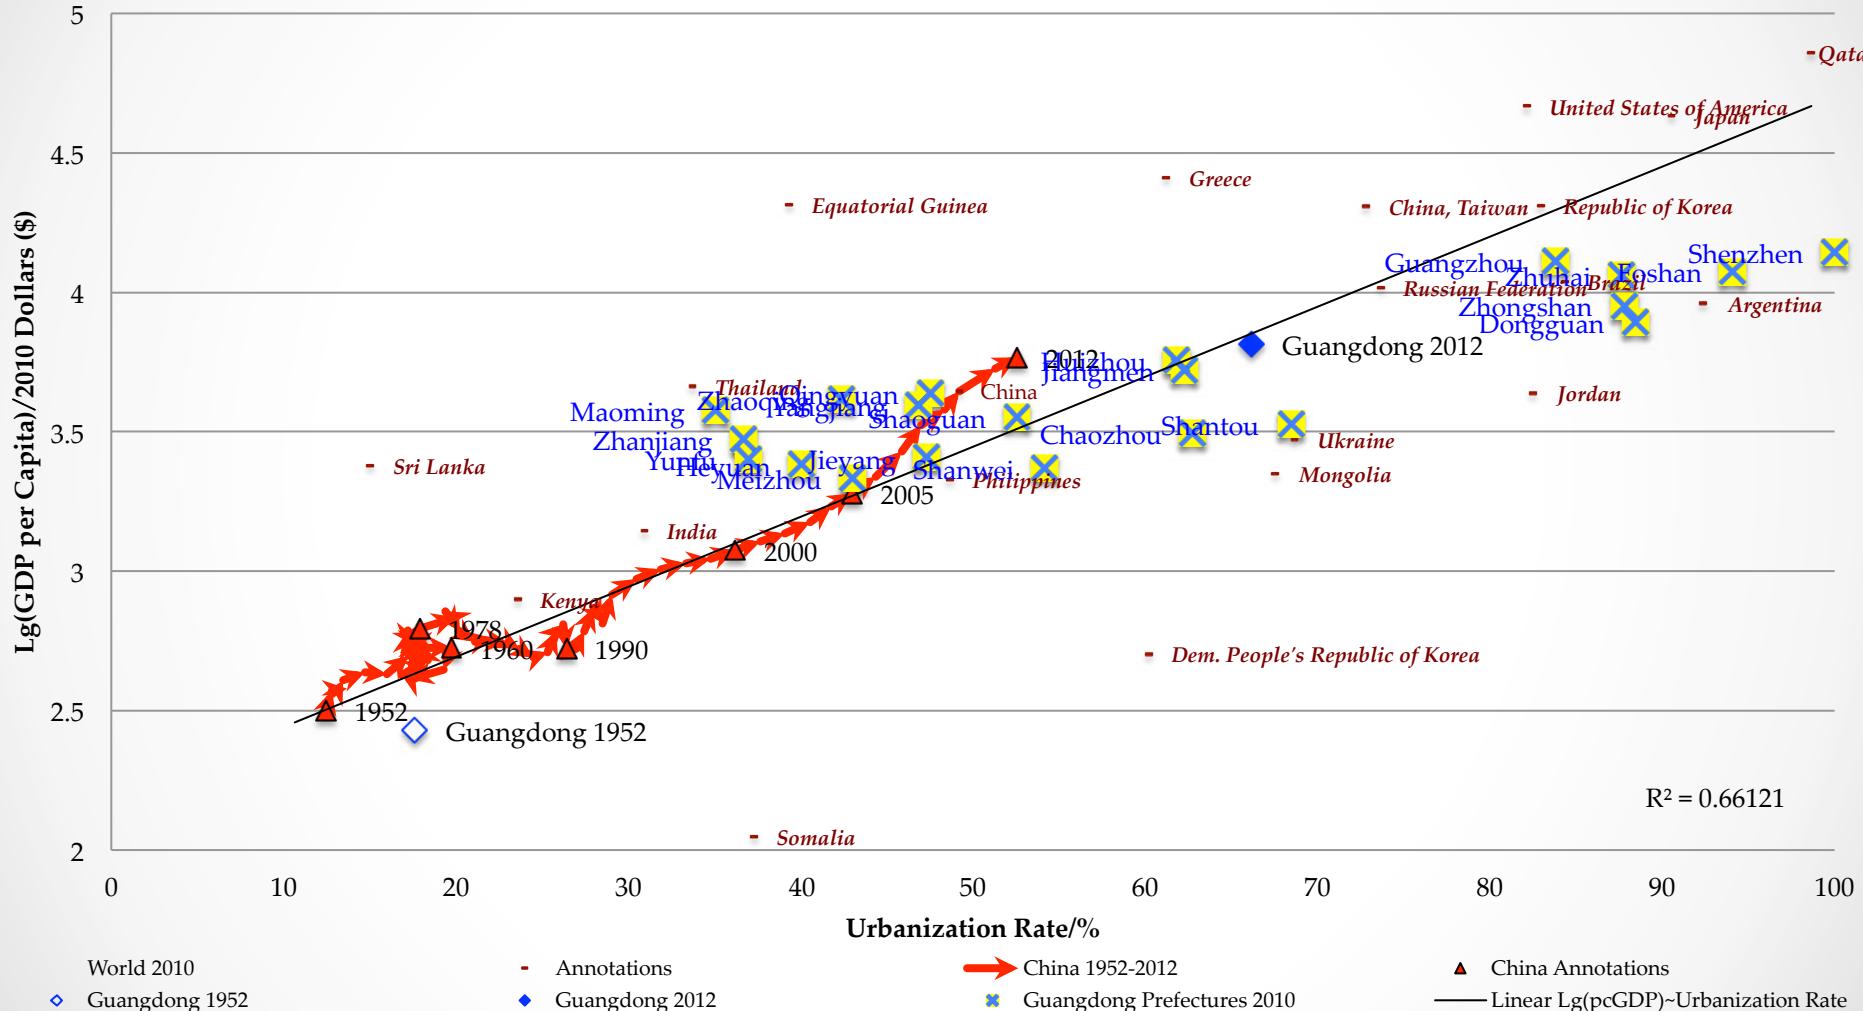

Urbanization Rate vs. Lg(GDP per Capita), China 1952-2012, with China Prefectures 2010; Background: World, 2010

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012, and China's 6<sup>th</sup> National Census data

# Unbalanced Urbanization

Urbanization Rate vs. Lg(GDP per Capita), China Provinces 1952-2012; with Guangdong Prefectures 2010; Background: World, 2010

Source: Own calculation based on the UN *World Urbanization Perspective 2012*, World Bank PPP per capita data 2012, and China's 6<sup>th</sup> National Census data

# Unbalanced Urbanization

Photograph courtesy of [kenner116](#) and [sterlingcollege](#) on Flickr. Under CC-BY.

- Despite similar urbanization level, rural Vermont(right) is different from rural Guizhou(left).
- In the developed countries, the countryside and the city imply different styles of life; however in developing countries, they mean different qualities of life.
- The two differ in terms of infrastructure accessibility, consumption level, educational quality, or even life expectancy.

# Unbalanced Urbanization

- Therefor, China's urbanization (and the developing world's in general) can be viewed as a process of "voting with feet".
- Putting another way, the developed world is in a state of urban-rural equilibrium, but the developing world isn't.
- In China, the mobility is further facilitated by characteristics of regional economy (rather than international economy, as seen in the Europe): perfect factor mobility, same currency, etc.
- Challenges: natural tendency toward over-urbanization (Harris and Todaro. 1970)
- Corrective policy tools: Hukou?
